# On the Subject of Odd Wall Out

Did you hear the one about the guitarist that couldn't take it anymore? They were asked to play Wonderwall.

The module will show a configuration of colored walls of one tile within a 4×4 maze. Pressing any of the buttons (without pressing the same button twice in a row) will cycle once through the remaining sixteen tiles.

Reconstruct the maze given these tiles such that among every tile, its colored walls match their colors with the walls of its adjacent tiles, including those on the opposite sides of the maze, <u>except for one wall.</u> An example is shown below.

Press the button in the position of the multicolored wall twice in a row to disarm the module.
